

Partnership Opportunity

DA42 NG Twin Star

Morristown, NJ

Three of our clients have asked us to find them a quarter-share partner in a new Diamond Twin Star DA42 NG. The plan today is to take delivery in December 2009 to capture the current year tax credits.

The Twin Star NG is Diamond's next generation of the proven Twin Star. It is equipped with Austro Turbo Diesel engines that carry the aircraft 175 KIAS on only 12.5 gallons of jet fuel per hour. The aircraft will be equipped with long range tanks giving her a range of 1180 NM. TKS known ice equipment is under discussion.

The Twin Star can fly to Charleston in three hours, Bermuda in four, and Miami in five, all with IFR reserves

The aircraft will be based at Morristown Municipal Airport. KMMU offers four runways, the largest of which is 5,999' x 150'. It has multiple instrument approaches, a tower, and aircraft rescue service.

The aircraft will be professionally managed, with factory trained professional pilots standing by for instruction and first officer duty.

To discuss the details, contact Robert Hadow, (973) 683-9002 roberth@bestinflight.net
